

Sprint 3 Release Plan

Generally speaking, the tasks that will be accomplished during Sprint 3 are related to:

- room booking for condo owners and rental users.
- Financial management for the condo management companies (operational budget, annual report, decision about condo fees).

Diving deep into each user story:

1- “Manager Input of Fees”: The manager of the respective condo management company enters the condo fee per square foot, per parking spot for each unit.

2- “Generation of operational budget”, and “Generation of annual report”: these two user stories fall under the same roof. The first user story consists of creating a financial system for the condo management company so the manager can keep track of all fees and costs. The second user story consists of generating an annual report describing the fees collected in a year, so the manager can view the yearly gross income.

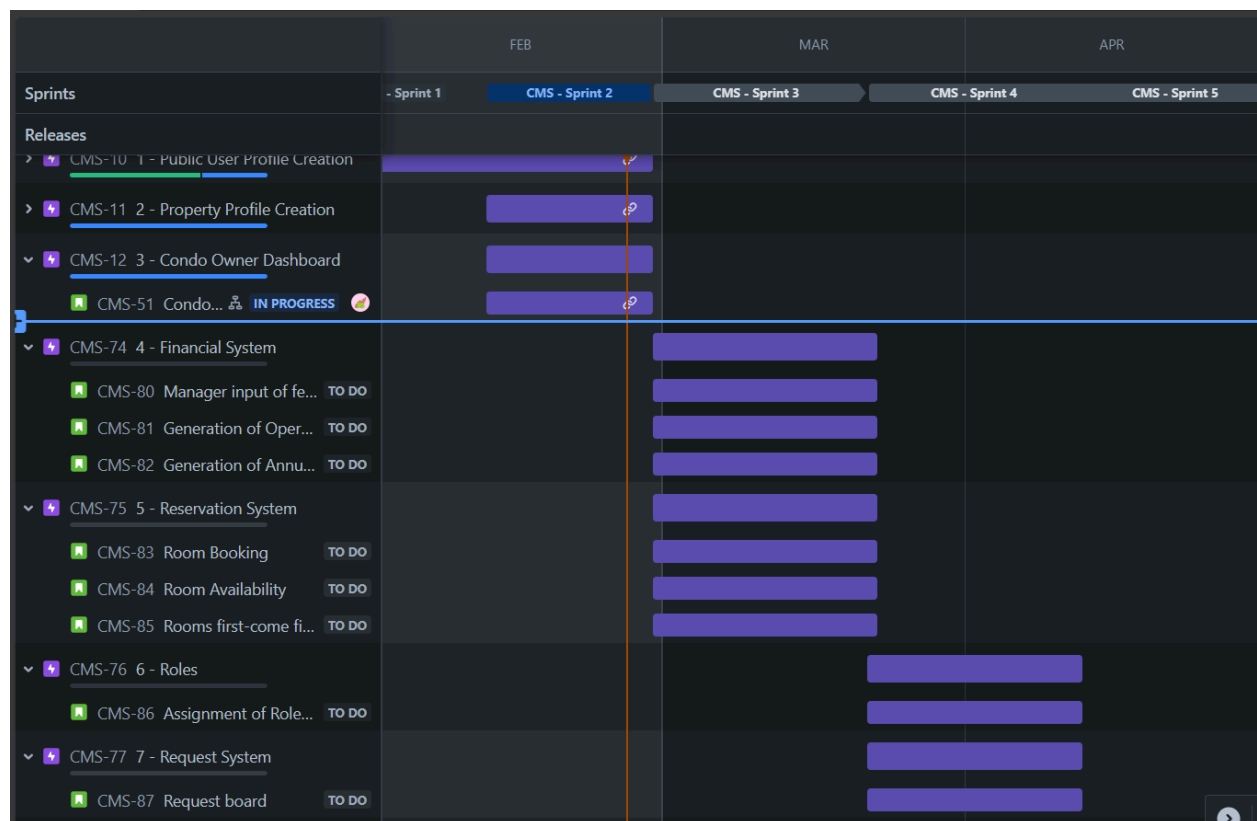

3- “Room booking”, “Room availability”, “Room first-come first-serve”: These 3 user stories fall under the same category. The first one allows the condo owner and the rental user to book any available common room. The second one checks for the availability of the desired common room that the condo owner or rental user wants to book. That way, the user can plan in advance. Finally, the third user story adds order to the booking process. This process works as first-come, first-served, which means that the first condo owner or rental user that books a common room will have access to this common room first.

User Story ID	User Story Points (USP)	Priority	Status
Manager Input of Fees (CMS-80)	4	High	TODO
Generation of operational budget (CMS-81)	4	High	TODO
Generation of annual report (CMS-82)	5	Medium	TODO

Room booking (CMS-83)	4	High	TODO
Room availability (CMS-84)	4	Medium	TODO
Room first-come first-serve (CMS-85)	5	High	TODO
Total USP	30		

The user story points were chosen based on 2 factors: difficulty of implementation and importance of implementation (how important it is to have this feature).

Future deployment plans: Microsoft Azure
